

Lab Exam – HTML

Exam Name:

Total Time: 60 Minutes

Student Id: E-251220

Total Marks: 10

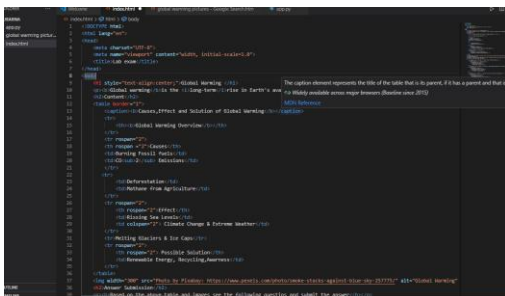

Section: 2AF

Date: 02/11/2025

Task: Design an HTML web page by following these steps:

1. Use semantic HTML tags (like <header>, <nav>, <main>, <section>, <footer>, etc.).
2. Separate each section using a background color or a solid border.
3. The navigation bar (nav bar) must be sticky (it should stay at the top when scrolling).
 - o On the right side of the nav bar, show your student ID.
4. In the footer, also write your student ID at the end.
5. After finishing your code, create a PDF file that includes:
 - o Your HTML code snippets
 - o The output screenshots of your webpage
6. You have to print the PDF file and submit it to the department. So, you must save a copy of the PDF file for yourself.
7. You will get 60 minutes total:
 - o 50 minutes for coding
 - o 10 minutes to make the PDF file.
8. The editable doc file is available from the link provided bellow:
https://github.com/asl-rnd/web_programming/blob/main/lab_exam_sample.docx

Code Snippets:

```
1 <!-- Header -->
2 <html>
3 <head>
4 <title> Lab Exam -- HTML -->
5 </head>
6 <body>
7 <!-- Navigation Bar -->
8 <nav>
9 <div>
10 <a href="#"> Home </a>
11 <a href="#"> About </a>
12 <a href="#"> Services </a>
13 <a href="#"> Contact </a>
14 </div>
15 </nav>
16 <!-- Main Content Area -->
17 <main>
18 <div>
19 <h2> Welcome to the Lab Exam -- HTML -->
20 </div>
21 </main>
22 <!-- Footer -->
23 <footer>
24 <div>
25 <p> Copyright © 2025. All rights reserved. </p>
26 </div>
27 </footer>
28 </body>
29 </html>
```

Lab Exam – HTML

```
1 <!-- Global Warming Overview -->
2 <div id="global-warming">
3   <h2>Global Warming</h2>
4   <img alt="Global warming picture" data-bbox="100 100 200 150"/>
5   <p>Global warming is the long-term rise in Earth's average surface temperature largely driven by human activities like burning fossil fuels. Science point to rising levels of CO2 and other greenhouse gases (the example, CH4, and N2O) as the primary cause. The result is changing weather patterns, melting ice, and sea-level rise - a trend that threatens public health.
```

Output:

Global Warming

Global warming is the long-term rise in Earth's average surface temperature largely driven by human activities like burning fossil fuels. Science point to rising levels of CO₂ and other greenhouse gases (the example, CH₄, and N₂O) as the primary cause. The result is changing weather patterns, melting ice, and sea-level rise - a trend that **threatens public health**.

Content

Causes	Effect	Solution
Burning Fossil Fuels	CO ₂ Emissions	Reduced use of renewable energy
Deforestation	Loss of Carbon Sinks	Planting more trees
Industrialization	Release of Greenhouse Gases	Switching to renewable energy
Rising Sea Levels	Climate Change & Extreme Weather	Melting glaciers & ice caps
Renewable Energy, Recycling, Awareness	Improved air quality	Increasing plastic production

Based on the above table and images see the following questions and submit the answer

Questions regarding Global Warming

- Which of the following is a major cause of Global Warming?
 - ☐ Increased use of renewable energy
 - ☒ Burning fossil fuels
 - ☐ Planting more trees
 - ☐ Recycling plastic waste
- Which of the following is an effect of Global Warming mentioned in the table?
 - ☐ Improved air quality
 - ☒ Melting glaciers & ice caps
 - ☐ Increase in forest areas
 - ☐ Decrease in sea levels
- Which one is suggest as a possible solution to reduce Global Warming?
 - ☐ Using more fossil fuels
 - ☐ Cutting down forest
 - ☒ Renewable energy, recycling, awareness
 - ☐ Increasing plastic production
